

PERFORMANCE STANDARDS: FOUNDATIONS IN PHYSICAL ACTIVITY AND EXERCISE

These competencies are intended as a prerequisite base on which subsequent training will build, depending on certifications chosen

I: HEALTH-RELATED BENEFITS OF PHYSICAL ACTIVITY

Knowledge Benchmark

The Exercise Leader describes the benefits of physical activity and its relationship to health and wellness.

Competencies

1. Summarizes the health-related benefits of physical activity
2. Describes the potential health impact of physical inactivity and sedentary lifestyles
3. Identifies modifiable lifestyle behaviours and non-modifiable risk factors and how they increase or decrease the risk of chronic disease

II: PHYSICAL ACTIVITY AND LIFESTYLE

Knowledge Benchmark

The Exercise Leader describes and integrates a holistic (whole-person wellness) approach to physical activity and lifestyle, identifies the elements of the active living concept, physical activity and physical literacy, and discusses the implications for exercise leadership.

Competencies

1. Describes holism and the benefits as it relates to physical activity
2. Discusses how to impart holism in an exercise leadership setting
3. Compares and contrasts the terms active living, physical activity, and physical literacy
4. Identifies common barriers to physical activity
5. Distinguishes between fundamental movement skills and physical literacy
6. Illustrates physical literacy in particular movement patterns
7. Demonstrates physical literacy in leadership and program development practices
8. Encourages participants in various ways to commit to exercise and take responsibility for their own health and well being

PERFORMANCE STANDARDS: FOUNDATIONS IN PHYSICAL ACTIVITY AND EXERCISE

III: LEADERSHIP & COMMUNICATION

Knowledge Benchmark

The Exercise Leader defines principles of adult learning, communication skills, and leadership models.

Competencies

1. Identifies the principles of adult learning and how they relate to an exercise environment
2. Chooses effective communication strategies for work with a variety of participants
3. Effective use of leadership practices within the exercise environment
4. Effective use of techniques that provide extrinsic motivation for a variety of participants

IV: ANATOMY

Knowledge Benchmark

The Exercise Leader demonstrates knowledge of human anatomy.

Competencies

1. Identifies the major muscle or muscle groups and the movements they perform, including trapezius; erector spinae; multifidus, quadratus lumborum, deltoid (anterior, middle, and posterior); rhomboids; pectoralis major; rectus abdominis; internal and external obliques; transverse abdominis; brachialis, brachioradialis biceps brachii; triceps brachii; the latissimus dorsi; iliopsoas; gluteus maximus, medius, and minimus; hip adductors; hamstrings; quadriceps (rectus femoris, vastus lateralis, vastus intermedius, vastus medialis); gastrocnemius; soleus; and tibialis anterior
2. Identifies the types of joints, including fibrous, cartilaginous, and synovial, and describes how bone structure influences joint function
3. Identifies joint structures and connective tissues, including the joint capsule, synovial membrane, articular cartilage, joint cavity, ligaments, and tendons
4. Identifies the major bones, including the cranium, vertebrae (cervical, thoracic, and lumbar areas), scapula, ribs, sternum, humerus, radius, ulna, clavicle, pelvic girdle, femur, tibia, fibula, and patella

PERFORMANCE STANDARDS: FOUNDATIONS IN PHYSICAL ACTIVITY AND EXERCISE

V: MOVEMENT MECHANICS

Knowledge Benchmark

The Exercise Leader demonstrates knowledge of basic biomechanics involved in human movement.

Competencies

1. Identifies the movements of the hip, elbow, shoulder girdle, spine, wrist, ankle, and knee
2. Identifies the major joint actions, including flexion, extension, abduction, adduction, medial /internal and lateral/external rotation, circumduction, hyperextension, dorsiflexion, plantar flexion, pronation, supination, eversion, inversion, lateral flexion, protraction, retraction, elevation, depression, transverse (horizontal) abduction and transverse (horizontal) adduction.
3. Defines the muscle roles: agonist, antagonist, synergist and stabilizer
4. For four exercises (push-up, squat, lunge, and plank), identifies the agonist, antagonist, and the type of contraction for each phase of the exercise
5. Defines and describes muscle actions: concentric, eccentric, isometric
6. Describes how the following impacts stability: a) size of the base of support, b) height of the centre of gravity, and c) location of the centre of gravity in relation to the base of support
7. Using the principle of length of levers, explains how they can be used to vary the intensity of an exercise

VI: EXERCISE PHYSIOLOGY

Knowledge Benchmark

The Exercise Leader describes exercise physiology underlying human movement.

Competencies

1. Identifies the average range for resting heart rate as well as the range for target exercise heart rate for an individual of a stated age using the Karvonen Method and “220 – age” max heart rate method
2. States whether each of the following increases or decreases during a cardiovascular exercise session: heart rate, blood pressure, stroke volume, and respiratory rate
3. Describes how oxygen enters and moves through the body and how carbon dioxide is removed from the muscles
4. Describes venous pooling and how to prevent it
5. Defines blood pressure and identifies normal resting values for diastolic and systolic
6. Describes how blood pressure adapts to cardiovascular conditioning

PERFORMANCE STANDARDS: FOUNDATIONS IN PHYSICAL ACTIVITY AND EXERCISE

7. Summarizes the key elements (endurance, total time, power) of the three energy systems (aerobic, lactic acid and ATP-CP) and their primary fuel (glycogen/glucose, fats, ATP-CP)
8. Identifies the primary system used in various physical activities
9. Describes the long-term training adaptations of the following fitness components: cardiovascular endurance, muscular endurance, muscular strength, and flexibility
10. Describes how environmental factors can affect the body's response to physical activity

VII: PRINCIPLES OF EXERCISE CONDITIONING

Knowledge Benchmark

The Exercise Leader describes exercise conditioning principles.

Competencies

1. Defines the FITT Principle: frequency, intensity, time (duration), and type of exercise for improving each of the following health-related components of fitness: flexibility, cardiovascular endurance, muscular strength, and muscular endurance
2. Compares and contrasts aerobic training modalities: continuous, circuit training, interval training/HIIT
3. Describes how using the talk test, rating of perceived exertion, the Borg scale, and training heart rate can be used to monitor and adjust intensity
4. Identifies the pros and cons associated with static, dynamic, PNF and ballistic stretching and when each is most appropriate
5. Describes the importance of developing a balanced muscle-conditioning program for the muscles surrounding the major joints
6. Describes the anatomical limitations to joint range of motion (flexibility)
7. Describes established training methods and principles (i.e., SAID, progressive overload, maintenance, FITT, reversibility, ceiling effect, symmetry)

VIII: EXERCISE ANALYSIS AND RISK MANAGEMENT

Knowledge Benchmark

The Exercise Leader describes safety in all aspects of planning and delivering of exercise programs as well as methods for preventing and managing injuries.

Competencies

1. Describes why and how to use the following pre-screening tools: PAR-Q+, ePARmed-X
2. Analyzes exercises for purpose, potential risks to joint structures, and modifications or alternative exercises

PERFORMANCE STANDARDS: FOUNDATIONS IN PHYSICAL ACTIVITY AND EXERCISE

3. Describes the signs and symptoms of overtraining
4. Recognizes the following signs and symptoms that would warrant modifying or stopping an exercise session:
 - Client's request to stop
 - Fatigue
 - Inability to maintain proper form or technique
 - Suspicion of heart attack or angina
 - Wheezing or severe on-set of shortness of breath
 - Dizziness, confusion, pallor, cyanosis, dyspnea, nausea
 - Cramps in the upper or lower body
 - CNS (central nervous system) symptoms, e.g., ataxia (failure of muscular coordination), vertigo (an illusion of dizzying movement), visual or gait problem (changes in pattern of walking or running)
 - Other sudden changes in performance or behaviour
5. Understands the importance and describes emergency procedures for a facility
6. Explains the PRICE principle as it relates to injury
7. Describes and demonstrates neutral posture

IX: PROGRAM PLANNING

Knowledge Benchmark

The Exercise Leader describes how to prepare an effective physical activity or exercise program using established training methods and principles.

Competencies

1. Identifies, analyzes and selects exercise modifications based on clients' needs
2. Describes the evidence-based principles of the World Health Organization's 2020 Guidelines for Physical Activity and Sedentary Behaviour

X: NUTRITION

Knowledge Benchmark

The Exercise Leader explains general healthy eating principles.

Competencies

1. Describes the main principles of *Canada's Food guide*
2. Describes general guidelines for choosing a pre-workout or recovery snack
3. Identifies professional limitations that may require a referral to a Registered Dietitian

PERFORMANCE STANDARDS: FOUNDATIONS IN PHYSICAL ACTIVITY AND EXERCISE**XI: BODY COMPOSITION****Knowledge Benchmark**

The Exercise Leader identifies safe and effective strategies for obtaining and maintaining a healthy body composition.

Competencies

1. Explains the energy–in/energy–out concept
2. Explains the relationship between food intake and physical activity in maintaining a healthy body composition
3. Explains how changes in body composition (lean and fat tissue changes) influence basal metabolic rate and subsequent energy balance
4. Defines atrophy and hypertrophy
